Instructions

Turn layer off before printing

First up this is a layered PDF this means you can customise the model before printing the UFO. You will need to be using Acrobat Reader 6+ to take full advantage of the layer features.

To access the layers panel in Acrobat go to View>>Navigation Panels>>Layers or Select the Layers icon on the Sidebar:

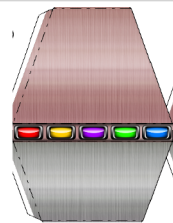

Once the layers panel is visible simply click the square/eye next to each layer name, eye means on, empty square off

First up a minor warning, due to large variety of colours available not all colours will look good with each of the two texture combinations available. So be sure you like what you see before printing the UFO.

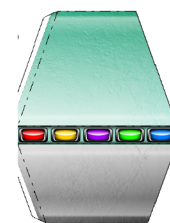

There are two key groups of base textures, these are composed of three layers each and are intended to be turned on and off together. The first group starts with the "Brushed Metal" and the second group start with "Paint", they are contained in the lower half of the layers list:

- Brushed Metal Highlight Two
- Brushed Metal Highlight One
- Brushed Metal texture

Brushed Example

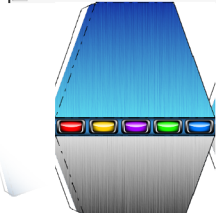

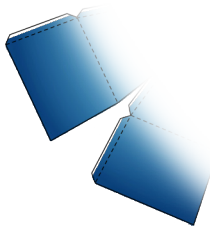

- Paint Highlight
- Paint Gradient
- Paint Metal Texture

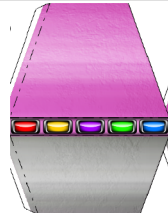

Paint Example

You can mix and match between the two types or even switch them off completely for a plain flat look.

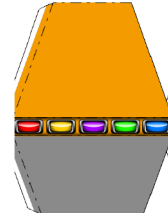

- Paint Highlight
- Paint Gradient
- Paint Metal Texture
- Brushed Metal Highlight Two
- Brushed Metal Highlight One
- Brushed Metal texture

- Paint Highlight
- Paint Gradient
- Paint Metal Texture
- Brushed Metal Highlight Two
- Brushed Metal Highlight One
- Brushed Metal texture

- Paint Highlight
- Paint Gradient
- Paint Metal Texture
- Brushed Metal Highlight Two
- Brushed Metal Highlight One
- Brushed Metal texture
